

Hummingbirds at Home

If you're a hummingbird fan, Audubon is launching a brand-new citizen-science project that's just for you. Hummingbirds at Home will help scientists understand how climate change, flowering patterns, and feeding by people are impacting hummingbirds. On the Hummingbirds at Home website you can track and report what nectar sources matter for your birds. A free mobile app makes it easy to report sightings and learn more about these remarkable birds.

Hummingbirds at Home has fledged!

Audubon's first all-digital, mobile citizen science program will build a continent-wide network of citizen scientists to help uncover how hummingbirds are affected by climate change. Using a mobile-optimized web portal and smartphone apps, people from across the U.S. can report their hummingbird sightings. The data collected will guide Audubon in devising actions to help hummingbirds thrive despite climate change and other threats. Please visit www.hummingbirdsathome.org for more information and to start logging your sightings!
